

Café Bon Bon - Technical Rider (2007)

The technical needs depend on the space. We have to adapt to whatever space we use. Our needs are very simple, however. Below is the basic Rider from the last space we performed in, which may have to alter depending on what the Bar / Nightclub has.

3 AutoPole2 (stands to hang the lights – If something equivalent doesn't exist already in the space)

4 Par 56 (lights with gels)

2 Small Active Speakers

1 Small Audio Mixing board

4 SM 58 Cable – Microphones (Depending on space – one can be wireless)

4 Microphone Stands

1 Subsnake

1 Videoprojector 2600 Lumen (and/or 2 TV screens or flatscreen monitors for live feed camera playback)

1Guitar Amplifier

1Guitar Stand

2 CD players

2 wireless lavalier microphones (radio head mics) with head mounts. (the kind that singers like madonna use for her big stage shows so that she can sing and dance at the same time. tiny microphones that are on a head set so that the mic goes right up to the mouth.)

We used the basic sound system of the bar for playback
